

# Dynamic Case Assessment

## *Flexibility that keeps you in control of e-Discovery*

Kiersted / Systems, a trusted electronic discovery specialist, offers a dynamic approach to case assessment that will help you lower costs, reduce risk, and stay in control. Today's regulations and rules make it essential to identify issues with your collected data as soon as possible. Now you can apply the principles of early case assessment throughout your electronic discovery process and adjust strategy when new factors come to light. Kiersted Dynamic Case Assessment provides the optimum flexibility you need, along with seamless integration into the review and culling process.

### ▶ **Quickly assess case data for clearer understanding**

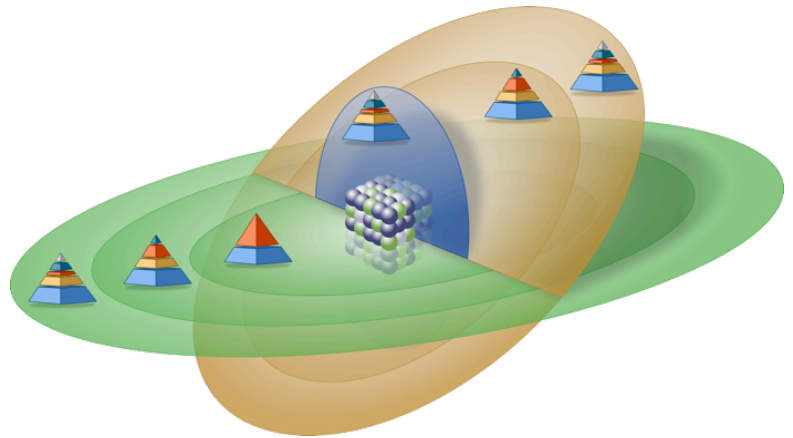

Through easy-to-understand graphical representations, you can identify logical groupings of information based upon real, quantifiable information. Then zoom in, adjust focus, and gain new clarity. See the data the way *you* want to see it.

### ▶ **Experience a dynamic approach**

Kiersted operates on the premise that while early case assessment is vital, ongoing analysis throughout the discovery process is equally important. Therefore, case assessment must be dynamic, which is consistent with our approach to workflow in general. You need the flexibility to come back to "the well" if circumstances change as many times as needed. Kiersted helps you assess, readjust and reprioritize on the fly.

### ▶ **Make well-informed decisions, saving time and money**

The sooner you know what kind of information you have, where it is, and how much you have, the sooner you can make sound decisions. Be able to determine whether and how to respond to pre-litigation demands, and once litigation is commenced, whether to attempt early resolution.

*Kiersted Dynamic Case Assessment cuts through the information from every angle, and at every stage in the process.*

### ▶ **Count on continued innovation**

Building on our long tradition of providing innovative technology and sound process to our clients, Kiersted will soon offer additional DCA functionality. These enhancements include:

- Concept searching
- Email threading
- Near duplicate detection and analysis

**Lighten your electronic discovery burden and leave the heavy lifting to us.**
